within which to promote the development of parallel computing both as an industrial technique and an academic discipline, extending the frontier of both the state of the art and the state of the practice. This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take-up. The main audience for and participants in Euro-Par are researchers in academic departments, government laboratories and industrial organisations. Euro-Par's objective is to become the primary choice of such professionals for the presentation of new results in their specific areas. Euro-Par is also interested in applications which demonstrate the effectiveness of the main Euro-Par themes. There is now a permanent Web site for the series <http://brahms.fmi.uni->

Euro-Par'99 The format of Euro-Par'99 follows that of the past four conferences and consists of a number of topics each individually monitored by a committee of four. There were originally 23 topics for this year's conference. The call for papers attracted 343 submissions of which 188 were accepted. Of the papers accepted, 4 were judged as distinguished, 111 as regular and 73 as short papers.

being • Cancer is the number one killer of most domestic animals • Includes health care information on dogs, cats, ferrets, rabbits, and guinea pigs • The first consumer-oriented book to assess conventional and alternative treatment options Keeping their pets healthy and happy is the number one priority of pet owners. Having lost four animal companions to cancer, author Deborah Straw became frustrated by the lack of information about what was causing the disease and wanted to know what she could do to treat and prevent it. This thorough and comprehensive guide is the result of her search for answers. It provides readers with the knowledge of how to ward off the unforeseen causes of cancer and protect the safety and health of their pets. Cancer is the number one killer of most domestic animals. revised and expanded edition of *Why Is Cancer Killing Our Pets?* includes the most up-to-date information on the environmental, dietary, and vaccine-related culprits that may cause cancer in pets and the preventive measures that can be taken against this disease. Readers whose pets have been diagnosed with cancer will benefit from the full spectrum of both conventional and alternative treatments presented in this book--from chemotherapy and laser surgery to herbal therapy, acupuncture, and touch therapy. In addition, readers will find guidance about caring for a sick pet and grieving his or her loss should the pet die. Full of information, options, and support, this is an essential resource for protecting pets.

The biannual *Formal Methods in Computer Aided Design*

conference (FMCAD 2000) is the third in a series of conferences under that title devoted to the use of discrete mathematical methods for the analysis of computer hardware and software. The work reported in this book describes the use of modeling languages and their associated automated analysis tools to specify and verify computing systems. Functional verification has become one of the principal costs in a modern computer design effort. In addition, verification of circuit models, timing, power, etc., requires even more effort. FMCAD provides a venue for academic and industrial researchers and practitioners to share their ideas and experiences of using discrete mathematical modeling and verification. It is noted with interest by the conference chairmen how this area has grown from just a few people

years ago to a vibrant area of research, development, and deployment. It is clear that these methods are helping reduce the cost of designing computing systems. As an example of this potential cost reduction, we have invited David Russino of Advanced Micro Devices, Inc. to describe his verification of floating-point algorithms being used in AMD microprocessors. The program includes 30 regular presentations selected from 63 submitted papers.

Beyond Grammar: Language, Power, and the Classroom asks readers to think about the power of words, the power of language attitudes, and the power of language policies as they play out in communities, in educational institutions, and in their own lives as individuals, teachers, and participants in

the larger community. Each chapter provides extended discussion of a set of critical language issues that directly affect students in classrooms: the political nature of language, the power of words, hate language and bullying, gender and language, dialects, and language policies. Written for pre-service and practicing teachers, this text addresses how teachers can alert students to the realities of language and power--removing language study from a "neutral" corner to situate it within the context of political, social, and cultural issues. Developing a critical pedagogy about language instruction can help educators understand that classrooms can either maintain existing inequity or address and diminish inequity through critical language study. A common framework structures the chapters of the text: * Each chapter

begins with an overview of the language issue in question, and includes references for further research and for classroom use, and provides applications for classroom teachers. * Numerous references to the popular press and the breadth of language issues found therein foreground current thought on socio-cultural language issues, attitudes, standards, and policies found in the culture(s) at large. * References to current and recent events illustrate the language issue's importance, cartoons address the issue, and brief "For Thought" activities illustrate the point being discussed and extend the reader's knowledge and awareness. * "Personal Explorations" ask readers to go beyond the text to develop further understanding; "Teaching Explorations" ask teachers to apply chapter content to

teaching situations. *Beyond Grammar: Language, Power, and the Classroom* is intended for undergraduate and master's level courses that address literacy education, linguistics, and issues of language and culture.
