Chapter 4 Ecology 4

The biosphere is that part of the planet in which living organisms can be found. A habitat is the place where a plant or animal lives. A population is all the members of the same species living in the habitat. A community is all the different populations of species living in the habitat. Chapter 4: Ecology notes page.

~~Biology Chapter 4: Population Ecology Flashcards | Quizlet~~

4.4 Community Ecology. Populations typically do not live in isolation from other species. Populations that interact within a given habitat form a community. The number of species occupying the same habitat and their relative abundance is known as the diversity of the community. Areas with low species diversity, such as the glaciers of Antarctica, still contain a wide variety of living organisms, whereas the diversity of tropical rainforests is so great that it cannot be accurately assessed.
