Characterization of Porous Solids and Powders: Surface ...

Description. The importance of porosity has long been recognized by scientists and engineers. Porous solids are widely encountered in industry and everyday life and their behaviour, e.g. chemical reactivity, adsorptive capacity, and catalytic activity is dependent on their pore structure.

Porous solids are classified as spongy and corpuscular. Many corpuscular systems are unconsolidated or only weakly aggregated. If the area of contact between assemblages of globular particles is small, the system will behave in some ways as a non-porous powder.

The objectives of the Third IUPAC Symposium on the Characterization of Porous Solids (COPS-III) were (1) to provide the opportunity for specialists to exchange ideas and new information on theoretical principles and methodology and (2) to generate proposals for the comparison and utilization of the many techniques now available for the characterization of porous solids.

Characterization of Porous Solids III, Volume 87 - 1st Edition

The book is a useful work of reference for anyone interested in characterizing porous solids, such as MCM-41 mesoporous materials, pillared clays, etc. Papers on pore structure determination using gas adsorption feature strongly, together
