In this paper, we examine the role of intertemporal and social preferences in explaining cooperation in social dilemmas. Recently, the COVID-19 pandemic caused an acute social dilemma in the Netherlands. In this dilemma, citizens had to decide whether or not to comply with the personal measures of the government regarding the "intelligent" lockdown. Through an online survey, using a general population sample of 1,019 adult citizens of the Netherlands, we measured people's consideration of future consequences (CFC), consideration of others (COO) and compliance with the personal measures provided by the government to contain the spread of COVID-19. We find that both an increase in COO and an increase in CFC are associated with an increased compliance with the personal measures. Moreover, the marginal effects of COO and CFC are lower for higher values of CFC and COO respectively. Of these two, COO appears to have the largest influence on compliance. Apart from these two variables, gender, age, perceived risk of others, perceived compliance by others and the opinion on government reaction also had a significant effect on compliance. These findings emphasize the importance of both social as well as intertemporal preferences in the prediction of cooperation in social dilemmas.

Biegelman, Certified Fraud Examiner, Fellow and Regent Emeritus of the Association of Certified Fraud Examiners, and coauthor of Executive Roadmap to Fraud Prevention and Internal Control: Creating a Culture of Compliance "If compliance wasn't difficult enough, now companies are faced with a barrage of technology vendors claiming to automate compliance as if it were a project. In his new book, Dr. Tarantino paints the reality of the situation: companies need to embrace the broader tenets of governance and use technology to embed governance policies and controls into their daily business processes. "In the EU experience, the very concept of union was formally used for the first time in the preamble of the 1957 Rome Treaty establishing the European Economic Community (EEC), when the signatory states expressed their determination "to lay the foundations of an ever-closer union among the peoples of Europe". This concept was then strengthened in the 1992 Maastricht Treaty or Treaty establishing the European Union (TEU), when the signatory states reaffirmed in the Treaty's preamble their resolution "to continue the process of creating an ever closer union among the peoples of Europe"..."

Compliance has become key to our contemporary markets, societies, and modes of governance across a variety of public and private domains. While this has stimulated a rich body of empirical and practical expertise on compliance, thus far, there has been no comprehensive understanding of what compliance is or how it influences various fields and sectors. The academic knowledge of compliance has remained siloed along different disciplinary domains, regulatory and legal spheres, and mechanisms and interventions. This handbook bridges these divides to provide the first one-stop overview of what compliance is, how we can best study it, and the core mechanisms that shape it. Written by leading experts, chapters offer perspectives from across law, regulatory studies, management science, criminology, economics, sociology, and psychology. This volume is the definitive and comprehensive account of compliance.

Ensure ethical behavior is part of your culture - starting at the executive level and cascading down through every area of your organization - with "The Ethical Dilemma". Is ethics really good business? Absolutely, says author Peter Garber. He makes a strong business case for how ethics will ultimately help you avoid fines and penalties and improve profits and customer and public relations. He shows you how to establish ethical behaviors and practices. Just as important, he demonstrates how to observe and enforce them, make people accountable and ensure there are penalties and consequences for non-compliance.

This book explores the role of artificial intelligence in the development of a claim that morality is person-made and rational. Professor Danielson builds moral robots that do better than amoral competitors in a tournament of games like the Prisoners Dilemma and Chicken. The book thus engages in current controversies over the adequacy of the received theory of rational choice. It sides with Gauthier and McClennan, who extend the devices of rational choice to include moral constraint. Artificial Morality goes further, by promoting communication, testing and copying of principles and by stressing empirical tests.
