Signal Processing 1 - Your Courses

This is the term project
for ECSE 512 Digital
Signal Processing 1.

The goal of this project
was to use LMS and
RLS algorithms to
create an adaptive FIR
filter that suppresses out
a narrowband noise in a
wideband desired signal.
The model used is
commonly known as the

Download

Ebook Ecse 512

prediction model, where both the exact desired signal and the noise is not known.
