This preparatory manual is a single source reference for postgraduate exam preparation. Intense efforts have gone in preparation of the book to make it complete in all aspects. In-depth coverage of every subject in the form of synopsis is the highlight of the book. To enhance rapid reading, quick learning facts have been framed as an effective learning tool. Multiple-choice questions have been designed to suit both national and international competitive postgraduate entrance examinations.

Ten-year-old Jennifer Day lives in a small mining town full of secrets. Trying to make sense of the sudden death of her teenage sister, Beth, she looks to the adult world around her for answers. As she recounts the final months of Beth's life, Jennifer sifts through the lies and the truth, but what she finds are mysteries, miracles, and more questions. Was Beth's death an accident? Why couldn't Jennifer—or anyone else—save her? Through Jennifer's eyes, we see one girl's failure to cross the threshold into adulthood as her family slowly falls apart.

The material in this book focuses on the study of the characteristics and life histories of common orders of insects. The significance of these six-legged creatures to our lives is explored. Each of the twelve teaching units in this book is introduced by a color transparency (print books) or PowerPoint slide (eBooks) that emphasizes the basic concept of the unit and presents questions for discussion. Reproducible student pages provide reinforcement and follow-up activities. The teaching guide offers descriptions of the basic concepts to be presented, background information, suggestions for enrichment activities, and a complete answer key.

Middle School Life Science Teacher's Guide is easy to use. The new design features tabbed, loose sheets which come in a stand-up box that fits neatly on a bookshelf. It is divided into units and chapters so that you may use only what you need. Instead of always transporting a large book or binder or box, you may take only the pages you need and place them in a separate binder or folder. Teachers can also share materials. While one is teaching a particular chapter, another may use the same resource material to teach a different chapter. It's simple; it's convenient.

Exclusively focused on preparing candidates for the FRCR Part 1 anatomy viewing paper, this book enables them to practice questions that have the look and feel of the actual exam. Containing eight practice examinations, each with 20 cases which have been thoroughly reviewed and tested by radiology registrars who have sat the exam, the questions are at increasing levels of difficulty. Screenshots from Osirix and advice on how to approach the exam familiarize candidates with its format. Each exam in the book contains a wide selection of images with all body parts and modalities equally represented to thoroughly test candidates interpretation skills. The 160 images cover all major plain films, CT, MRI, barium studies and other contrast examinations, as well as some of the newer techniques, based on the examples published online by the Royal College of Radiologists.

Based on the integrated and holistic approach, the book systematically and comprehensively covers a general account of taxonomical, morphological, anatomical and physiological features of chordates. The text does not restrict discussion only to a representative genus in each class, but also provides knowledge of other important genera, and gives their general account and comparative features to help students understand animal diversity in the phylum. Besides the type study, the book also deals with the developmental and ecological aspects of the genera discussed. The book is intended to fulfill the curriculum need of B.Sc. Zoology, Life Sciences, Biological Sciences and Animal Sciences as well as M.Sc. Zoology students for their core course on chordata (chordates). Additionally, the students appearing for various competitive examinations and entrance test for postgraduate courses in the related fields will find this book useful. KEY FEATURES ☑ Incorporates the topics of modern research such as Fish as Biocontrol Agents, Mimicry in Birds, Nesting and Brooding Behaviour of Birds, and so on. ☑ Compares important genera of the class-morphological, anatomical and adaptive features. ☑ Well-illustrated coloured diagrams with meticulous details and labelling for clear understanding of anatomy. ☑ Important information nested in boxes, points to remember and classification in the form of flow charts add strength to each chapter. ☑ Provides a variety of pedagogically arranged interactive exercises for self assessment—from fill in the blanks, true/false statements, give reasons to MCQs.
