Most Bajas were sold with automatic transmissions, but a few turbocharged manuals made their way out of the factory. The Baja scored pretty well with owners. J.D. Power survey responders named it ...

This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

Every day, billions of photographs, news stories, songs, X-rays, TV shows, phone calls, and emails are being scattered around the world as sequences of zeroes and ones: bits. We can't escape this explosion of digital information and few of us want to-the benefits are too seductive. The technology has enabled unprecedented innovation, collaboration, entertainment, and democratic participation. But the same engineering marvels are shattering centuries-old assumptions about privacy, identity, free expression, and personal control as more and more details of our lives are captured as digital data. Can you control who sees all that personal information about you? Can email be truly confidential, when nothing seems to be private? Shouldn't the Internet be censored the way radio and TV are? is it really a federal crime to download music? When you use Google or Yahoo! to search for something, how do they decide which sites to show you? Do you still have free speech in the digital world? Do you have a voice in shaping government or corporate policies about any of this? Blown to Bits offers provocative answers to these questions and tells intriguing real-life stories. This book is a wake-up call To The human consequences of the digital explosion.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven ' t kept pace with today ' s more hostile security environment, leaving millions vulnerable to attack. The Car Hacker ' s Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle ' s communication network, you ' ll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker ' s Handbook will show you how to: –Build an accurate threat model for your vehicle –Reverse engineer the CAN bus to fake engine signals –Exploit vulnerabilities in diagnostic and data-logging systems –Hack the ECU and other firmware and embedded systems –Feed exploits through infotainment and vehicle-to-vehicle communication systems –Override factory settings with performance-tuning techniques –Build physical and virtual test benches to try out exploits safely If you ' re curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker ' s Handbook your first stop.

Hello -- my name is Don Bongaards and I am a retired engineer. This book is a sequel to my first book entitled A Sense of Urgency which described how the United States could free itself from its dependence upon imported oil and achieves economic growth and prosperity by phasing in hydrogen fuel as a substitute for gasoline. I have written this sequel to introduce some new ideas that can make the transition to hydrogen fuel more cost effective and practical -- like beginning the hydrogen phase in process using reformed natural gas while in the short run drilling for as much domestic oil and natural gas as possible. In the long run a thermo-chemical process can take over in 20 to 40 years to make hydrogen from water economically viable. At today's natural gas prices, reformed hydrogen could be sold at the gas station pump for about three dollars per equivalent gasoline gallon. Not bad when you consider that the currently available Honda FCX hydrogen fuel cell car can achieve more than 60 miles per gallon. Another reason for writing this sequel is to emphasize the point that global oil consumption has become a clear and present danger. We are acting like the proverbial frog that is sitting in a pot of warm water that is quickly coming to a boil. The exponentially increasing worldwide demand for oil is becoming more of a problem than is commonly thought. In spite of what you might have been told about hundreds of years supply of oil and other fossil fuels, the truth is -- it just ain't so. Countries like China and India are beginning to consume oil at an increasingly faster rate. The world currently consumes about 33 billion barrels of oil per year and the known reserves are less than 1,000 billion barrels. The problem is that the 33 billion barrels per year consumption rate is increasing at about 2 percent each year. If you do the arithmetic, the world will consume about 110 billion barrels of oil per year by the year 2070 -- less than 60 years from now. However, during this time we will have had a total consumption of about 3,500 billion barrels. Do you think that we will discover enough oil and oil sands to fill this demand? Do you think that we can convert enough coal into synthetic fuel? Do you think that we will have enough natural gas to substitute for gasoline? Do you think that oil shale will come to the rescue? How about electric cars that use wind and solar energy? Think again -- it isn't going to happen -- and I will explain why in this book. And -- by the way -- don't assume that the United States will fuel itself while the rest of the world runs out of fuel. Since the United States spends almost 700 billion dollars each year to purchase oil from other countries doesn't it make sense that this money would be better spent in the United States. How about forming a hydrogen fuel consortium comprised of 50 million social security investors and potentially save this vital program from extinction. While this might not be the only way to get the job done I am proposing it in this book as food for thought. From what I have just described with regard to current oil consumption demand, don't surprised if gasoline prices don't skyrocket in the not too distant future -- how about ten or more dollars per gallon! Let's begin building a hydrogen fuel infrastructure now to protect our children and grandchildren from an impending disaster!

Offers a narrative history of the role of the U.S. in a series of coups, revolutions, and invasions that toppled fourteen foreign governments, from the overthrow of the Hawaiian monarchy in 1893 to the 2003 war in Iraq, and examines the sometimes disastrous long-term repercussions of such operations. Reprint.
