This strategic paper discusses Ethiopia ' s growth and transformation plan (GTP) for the periods 2010/2011 and 2014/2015. The Ethiopian government ' s main development agenda has been poverty eradication. The government has designed, and is implementing, strategies, policies, and plans to guide and manage the overall development of the country accordingly. The GTP envisages that, besides maintaining a fast-growing economy, better results will be realized in all sectors. Implementation of the GTP requires mobilization of financial and human resources, especially for infrastructure development.

This strategic paper discusses Ethiopia ' s growth and transformation plan (GTP) for the periods 2010/2011 and 2014/2015. The basis for the GTP has been the policy matrix, which is the benchmark placed in the government's existing Welfare Monitoring and Evaluation (M&E) System since 1996. The M&E system provides the government with reliable mechanisms to measure the efficiency of those government actions and the effectiveness of public policies in achieving the objectives stated in the GTP. The paper discusses the structure and legal framework of the policy matrix.

Ethiopia ' s growth and transformation plan (GTP) for the periods 2010/2011 and 2014/2015 is reviewed by the joint staff advisory note has been discussed in this study. The macroeconomic framework designed to improve the GTP ' s growth is outlined. The priority actions and critical areas for pro-poor growth taken by the government are discussed in detail. Implementation of framework, monitoring, and evaluation is also outlined.

This paper evaluates Ethiopia ' s urbanization trend during the last four decades, while also considering Ethiopia ' s structural transformation and recent public investments to promote greater industrialization within the country. Ethiopia ' s urban population grew 4.2 percent per year between 1994 and 2015, far outpacing the overall population growth rate of 2.5 percent. Compared to the urban growth rate of Africa (3.5 percent per year), Ethiopia experienced a 20 percent faster urban population growth rate (UNDESA 2015). Urbanization in Ethiopia is expected to reach 38 percent by 2050. However, this level is relatively low compared to the majority of sub-Saharan Africa (SSA) countries. Improved road infrastructure, rural to urban migration and secondary city development is increasing urbanization within the country. In addition, recent public investments to promote industrialization and increase manufacturing labor opportunities via newly constructed and planned industrial parks are projected to increase urbanization and bolster structural transformation across the country. We evaluate these investments and demographic trends within the context of other countries in sub-Saharan Africa, as well as with the experience of India and China. Ethiopia ' s investment in higher-value manufacturing and service activities via economic zones may provide similar infrastructure to that of China and India ' s ' township and village enterprises ' (TVE). However, a focus on increasing human capacity and labor mobility will be necessary to ensure that rural farmers are able to take advantage of labor opportunities outside of the agriculture sector. We calculate the projected economic impact of Ethiopia ' s planned industrial zones and sugar factories and find that while public and private investment in industrial and agro-industrial parks may provide a catalyst for future growth, they are likely to provide only a small share of total output and employment. Investments in sugar factories are anticipated to total USD 5.2 billion, with estimated production of USD 3.6 billion and value-added of USD 3.3 billion. However, an increase in sugar output of this magnitude would imply massive sugar exports that may not be financially profitable.
