From life in his war-torn homeland to his quest for the American dream, Alfred Langer's determination and faith helped him surmount overwhelming obstacles and hardships to reach A New Beginning.

This book is a postmodern analysis of Ronald Reagan's 1984 film, A New Beginning, which marked the coming-of-age of the televisual political campaign film. The film was a landmark in the art of political filmmaking. Its thesis proclaimed a resurgence of American pride, patriotism, and prosperity under the leadership of Ronald Reagan. A New Beginning was unprecedented for a number of reasons: it replaced the traditional nominating speech for the candidate at the Republican National Convention; its form was a hybrid documentary and advertisement; it illustrated the use of televisual rebirth rhetoric to gain public support for a political ideology; and, most importantly, the masterful project documented a shift from verbal to visual rhetoric in American presidential campaigning. The author examines the film as a cultural text and as an effective political tool. Framing, ideology, myth, and visual cliché are analytic tools used to deconstruct the film; the method combines rhetorical theory with communication theory and semiotically-based theories of film and television. Morreale gives insight into the increasingly prevalent use of television to create a political reality.

In the Beginning: Science Faces God in the Book of Genesis. The beginning of time. The origin of life. In our Western civilization, there are two influential accounts of beginnings. One is the biblical account, compiled more than two thousand years ago by Judean writers who based much of their thinking on the Babylonian astronomical lore of the day. The other is the account of modern science, which, in the last century, has slowly built up a coherent picture of how it all began. Both represent the best thinking of their times, and in this line-by-line annotation of the first eleven chapters of Genesis, Isaac Asimov carefully and evenhandedly compares the two accounts, pointing out where they are similar and where they are different. "There is no version of primeval history, preceding the discoveries of modern science, that is as rational and as inspiring as that of the Book of Genesis," Asimov says. However, human knowledge does increase, and if the biblical writers "had written those early chapters of Genesis knowing what we know today, we can be certain that they would have written it completely differently." Isaac Asimov brings to this fascinating subject his wide-ranging knowledge of science and history--and his award-winning ability to explain the complex with accuracy, clarity, and wit.
