5. Prove that the following Lebesgue integrals exist: $\int_0^1 x \log x^2 dx$, $\int_0^1 x \log \log(1/x)^2 dx$, $\int_0^1 x \log x dx$. Solution: The function $(x \log x)^2$ is continuous, hence measurable, and bounded between 0 and e^2 on $(0, 1)$. Thus it is Lebesgue integrable on $[0, 1]$ by Corollary 2 of Theorem 10.35 in the text.

Since $B = \{f(1) ; \} : 2Rg$, it follows from Theorem 1.2.11 that X is measurable with respect to the right hand side (RHS), which hence also contains the left hand side (LHS).

MEASURE and INTEGRATION Problems with Solutions
In mathematics, the integral of a non-negative function of a single variable can be regarded, in the simplest case, as the area between the graph of that function and the x-axis. The Lebesgue integral extends the integral to a larger class of functions. It also extends the domains on which these functions can be defined. Long before the 20th century, mathematicians already understood that for non-negative functions with a smooth enough graph—such as continuous functions on closed bounded ...

Elementary Introduction to the Lebesgue Integral is not just an excellent primer of the Lebesgue integral for undergraduate students but a valuable tool for tomorrow's mathematicians. Since the early twentieth century, the Lebesgue integral has been a mainstay of mathematical analysis because of its important properties with respect to limits. For this reason, it is vital that mathematical ...
