Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.

SHE WAS ALL HE HAD EVER WANTED When Edouard Gillet, Comte de Trouville, wed the beautiful Lady Anne of Naincroft, he thought he had found his heart's desire. But was the passion he had willingly declared from the battlements shared by his newly pledged bride? Or would the unspoken secret still between them destroy their newfound happiness? Though it would break her heart, Anne prayed that Edouard would leave Scotland behind and return to the Court

of France. For the longer he stayed, the greater the risk he would discover that her son was not all he seemed—and the mighty comte was surely not a man who could accept anything less than perfection.
