Metacognition with the teaching and learning of science concepts, and with higher order thinking more generally. The book provides readers with a background on metacognition and analyses the latest developments in the field.

Metacognition in Science Education | SpringerLink

Metacognitive conflict is a process where students are encouraged to consider their perceptions surrounding what it means to be a good science learner, before having these ideas discussed (and potentially challenged) by their teacher, causing them to reflect on their processes and methods of learning.

Developing metacognition in science class

It appears that metacognitive skills for orientation, planning, monitoring, and evaluation are equally important for these learning processes in science education. Finally, implications for the instruction of metacognitive skills are discussed. The chapter emphasizes the recurrent problems with the “ fuzziness ” of the concept “ metacognition ” and of its constituents.
