This volume presents a cross-section of the most common transport vehicles produced and used by the German army. Tanks plus auxiliary vehicles such as cars, motorcycles, vans, ambulances, trucks and tractors made it possible for the troops to keep moving. These lightly armored or unarmored vehicles—aka “soft skins”—operated behind the front lines, maintaining supply lines, connecting armies with their home bases, and ultimately determining the outcome of battle. Beginning with the development of military vehicles in the early 1930s, this volume discusses the ways in which this new technology influenced and, to some extent, facilitated Hitler’s program of rearmament. Nomenclature, standard equipment, camouflage and the combat roles of the various vehicles are thoroughly examined. Individual vehicle types are arranged and discussed by the following classifications: cars and motorcycles; trucks and tractors; half-tracks and wheeled combat vehicles. Accompanied by well-researched, detailed line drawings, each section deals with a number of individual vehicles, describing their design, manufacture and specific use.

This new book will be an essential reference for modellers and wargamers who build and paint World War II British armoured fighting vehicles. It provides extensive information on different types of vehicles, describing when they were used, by whom and for what purpose. In addition, the many modifications made to vehicles during the war are included, with guidance on how to create these for models. The step-by-step building and painting guides illustrate vehicles in 1/35, 1/72 and 1/76 scale. This book features models, often with a comparison of models from different manufacturers, for the following: M3 Grant Mk1, including a North African version; Cromwell Mk IV; Royal Marine Centaur; Cavalier Observation Post; Sherman M4A1 and Crab; Crusader III AA Mk 1; Matilda; Morris and Guy Quads; Bedford QJs; Scammell Pioneer Heavy Artillery tractor conversion; Anti-tank guns, e.g. the ‘Pheasant’, field guns, anti-aircraft guns, etc and, finally, figures which include uniform painting guides. The author has been a keen military modeller for many years and has a particular passion for British & Commonwealth forces of WWII. It is superbly illustrated with 335 colour photographs.

Tank destroyers were the US Army’s response to blitzkrieg, and were based around the concept of mounting a large anti-tank gun on a light, fast moving vehicle. They served in the Mediterranean, Pacific, and North-West Europe theatres, and were also supplied to other Allied armies. These vehicles form an attractive modelling subject; their open turrets provide plenty of opportunity for detail work, as demonstrated here by the author in clear step-by-step instructions. Packed with tips and techniques from a leading modeller and Allied armour expert, this title covers the M10, M18, M36, and M39, and features modelling projects in 1/35th and 1/72nd scale.
