the authors have found in
the study of behavior and to
make the course more
exciting for you to teach.
To achieve this goal, Drs.
Passer and Smith present
Psychology from a

viewing the world of
behavior in a more
analytical, sophisticated
way which includes
considering the multiple

Structural equation modeling
(SEM) is becoming the
central and one of the most
popular analytical tools in

the social sciences. Many
classical and modern
statistical techniques such
as regression analysis, path
analysis, confirmatory
factor analysis, and models
with both measurement and
structural components have

been shown to fall under the umbrella of SEM. Thus, the flexibility of SEM makes it applicable to many research designs, including experimental and non-experimental data, cross-sectional and longitudinal

data, and multiple-group and multilevel data. In this eBook, you will find 19 cutting-edge papers from the Research Topic: Recent Advancements in Structural Equation Modeling (SEM). These 19 papers cover a wide

variety of topics related to
SEM, including: (a) analysis
of different types of data
(from cross-sectional data
with floor effects to
complex survey data and
longitudinal data); (b)
measurement-related issues

(from the development of new scale to the evaluation of person fit and new ways to test measurement invariance); and (c) technical advancement and software development. We hope that the readers will
