Planting Seeds Theme for Preschool

Select 3-4 Lima bean seeds. Set aside. Tip: Avoid selecting more than 4 beans to allow roots to grow. Use adhesive tape to cover a small section of the jar with dark-colored paper. Tip: if not testing for light and dark growth, then skip this section. Use a dry paper towel and insert into the jar. Insert the beans one a time.

Easy Science Project for Kids: How to Grow a Lima Bean Seed

On top of each staple, place a pinto bean. We alternate the beans upside down to see how the roots grow when they start coming out of the bean top. Tape the baggie to the window. Be sure your child can reach the top to water the plant.

Bean Plant Experiment for Kids - How To Homeschool My Child

Mar 29, 2017 - Planting and growing a beanstalk using lima beans in your preschool, pre-k, or kindergarten classroom. Perfect for a Jack and the Beanstalk theme!

Describes what happens to a bean as it is soaked, planted, watered, repotted, and eventually produces pods with more beans inside.

"Gail Gibbons is known for her ability to bring the nonfiction world into focus for young students. Through pictures, captions, and text, this book provides a window into the world of growing things...Erin Mallon complements Gibbons's text with a clear, clipped, and purposeful narration." -AudioFile Magazine

Jasper hopes to grow a beanstalk, but becomes discouraged when the bean he plants doesn't grow after a week.

How does a tiny acorn grow into an enormous oak tree? This classic Level 1 Let's-Read-and-Find-Out picture book shows how little seeds become the plants and trees that surround us. This nonfiction picture book is an excellent choice to share during homeschooling, in particular for children ages 4 to 6. It's a fun way to learn to read and as a supplement for activity books for children. Now rebranded with a new cover look, this book includes a find out more activity section with a simple experiment encouraging kids to discover what a seed needs to grow. Both text and artwork were expert-reviewed for accuracy. This is a Level 1 Let's-Read-and-Find-Out, which means the book explores introductory concepts perfect for children in the primary grades and supports the Common Core Learning Standards and Next Generation Science Standards. Let's-Read-and-Find-Out is the winner of the American Association for the Advancement of Science/Subaru Science Books & Films Prize for Outstanding Science Series.

Join the tiny seed on an adventure as it becomes a giant flower!

"The expressive narrator charms the listener by impersonating the characters...Short segments of music and brief sound effects add interest." - Booklist

This educational and enjoyable book helps children understand how to plant bulbs, seeds, and seedlings, and nurture their growth. Lois Ehlert's bold collage illustrations include six pages that present all the flowers of each color of the rainbow.

Maya loves contests, so she is excited when her teacher announces they will plant a school garden like Thomas Jefferson's garden at Monticello—and they'll have a "First Peas to the Table" contest, just like Jefferson and his neighbors had each spring. Maya plants her pea seeds with a secret head start—found in Jefferson's Garden Book—and keeps careful notes in her garden journal. But her friend Shakayla has plans of her own for the contest.

Discover the fascinating and surprising ways that seeds move and find a place to grow in this gorgeous picture book from Caldecott Honoree Robin Page. Every seed, big or small, needs sunlight, water, and an uncrowded place to put down roots. But how do seeds get to the perfect place to grow? This exploration of seed dispersal covers a wide range of seeds and the creatures that help them move, from a coconut seed floating on waves to an African grass seed rolled by a dung beetle, to a milkweed seed floating on the wind.

Nicholas Harberd, a father, scientist, and nature lover, spends his days at the lab directing a team discovering the secrets of how plants grow, using a common weed as their example. Concerned that he's losing sight of the weed's ordinary days in the world, he sets out to find an example of the same plant in the wild. And so begins this unique and beautiful book-part field notebook, part sketchbook, and part journal. Building on a narrative of the passing seasons of 2004, Harberd relates that narrative to the life history of what becomes an iconic plant. As a biologist and close observer, he is able to describe both what is visible and the hidden molecular mechanisms that underlie the visible events in the plant's life. In the process, he reveals what the daily life of a scientist truly is. Beautifully produced, with dozens of diagrams and drawings, and written with thoughtfulness and passion, Seed to Seed is a testament to the wonder of the natural world around us. Nicholas Harberd is one of the world's leading plant biologists. He directs a research team at the John Innes Centre (Europe's premier plant and microbial science research institute) and is Honorary Professor in the Department of Biological Sciences at the University of East Anglia, Norwich. He is the author of numerous scientific papers and has published in the leading international journals Nature and Science.
